Create Braille Math in MS Word:

Insert text and math equations directly into a Microsoft Word document and translate to braille math with the touch of a button.

Equations will appear in both braille math and ink allowing sighted readers to follow along.

- Currently outputs to Nemeth and LaTeX
- Available with Tiger Software Suite 4.0

Coming in 2008:

- Additional math codes
- Ability to scan printed math documents into MS Word

Audio Graphing Calculator

The Fully-Accessible, Scientific Graphing Calculator for Windows®

The AGC provides the functionality of handheld scientific calculators commonly used in the classroom. Operating on a flexible Windows platform and augmented with audio and tactile feedback, the AGC provides an alternative for people who cannot effectively use a handheld calculator, or those seeking a more interactive interface.

The AGC is accessible to anyone who can use a computer, regardless of ability, allowing the user to concentrate on math, not on learning the tools to access it.

Download a free 30-day trial of the AGC at www.viewplus.com

Universal-Use Features Include:

- Description of graph shape through audio tones and cues
- Voiced menus
- Scaleable visual display
- Keyboard navigation
- Ability to print tactile graphs on Tiger printers

New features for AGC include:

- Advanced matrix functions
- Display multiple graphs and find intersections
- More powerful expression evaluator
- Ability to locate polar coordinates
- Faster computation time
- More statistical functions
